

Embedded Asterisk

A Crazy Man's Approach to VoIP

Terry Dunlap

The Master Plan

- Embedded... are you insane?
- My kinda shopping
- In search of... simplicity
- Network administration
- A step-by-step guide to insanity
- Future lunacy

Embedded... are you insane?

- Cost
 - Verizon's plan still costs too much
- Single Line Replacement
 - Local dialing for relatives
 - Voicemail w/SMS notification
- Trixbox is overkill
 - Full-blown PBX replacement solution
- High geek factor

Dial Tone Line	\$ 5.92
Non-Published Number	\$ 1.89
Local Calls	\$ 0.50
MD Fee	\$ 0.20
MD Gross Receipts Tax	\$ 0.31
Montgomery County Local	\$ 2.00
MD 911 Fee	\$ 1.00
MD Federal Universal Service	\$ 0.70
Federal Tax	\$ 0.50
Federal Subscriber Line	\$ 5.99
Total Bill	\$19.01

My Verizon Phone Bill

This is a typical monthly phone bill for me as part of their “cheapest” available plan known as “Tone Economy Message Service.” You must ask for it by name.

Update

My kinda shopping

- Soekris net4826
 - 233 MHz AMD Geode SC1100
 - 64 MB SDRAM
 - 64 MB on-board Compact Flash
 - 10/100 Ethernet Port
 - Serial Port
 - 2 Mini-PCI Type III Sockets
- Cost: \$195

My kinda shopping

- USB Card Reader
- SD Card
- VMware Server Software
- Wireless LAN
- Cost: ???

In search of... simplicity

- Asterisk Distributions:
 - AsteriskNOW™
 - Trixbox
 - AdminsParadise VoIP & Fax System
 - Evolution PBX
 - Elastix PBX
- Common Problems
 - Bloatware!

In search of... simplicity

- AstLinux
 - Asterisk
 - Linux kernel 2.6
 - busybox
 - bash
 - mini_httpd
 - OpenSSH & OpenSSL
 - iptables
 - and much more useful stuff

Network Administration

- Embedded development system
 - Virtual machine running Ubuntu
 - Servers
 - DHCP
 - PXE boot needs IP and kernel image location
 - TFTP
 - Provides the kernel image to load
 - NFS
 - Provides a networked file system and access to the AstLinux installation

Step-by-Step Guide to Insanity

- The Ubuntu Nitty-Gritty
 - Server version of Ubuntu 6.06 LTS
 - Update system
 - sudo apt-get update
 - sudo apt-get upgrade
 - Install servers
 - sudo apt-get install dhcp3-server
 - sudo apt-get install tftpd-hpa
 - sudo apt-get install nfs-common
 - sudo apt-get install nfs-kernel-server

Step-by-Step Guide to Insanity

/etc/dhcp/dhcpd.config

```
ddns-update-style none;
default-lease-time 600;
max-lease-time 7200;
subnet 192.168.0.0 netmask 255.255.255.0 {
    host soekris {
        hardware ethernet 00:00:24:c5:56:04;
        fixed-address 192.168.0.50;
        option subnet-mask 255.255.255.0;
        option routers 192.168.0.1;
        option domain-name-servers 192.168.0.1;
        server-name "192.168.0.105";
        filename "pxelinux.0";
    }
}
```

Step-by-Step Guide to Insanity

/etc/exports

/astlinux 192.168.0.50(rw,no_root_squash,sync)

Step-by-Step Guide to Insanity

- Let's fire it up!
 - sudo /etc/init.d/dhcp3-server start
 - sudo /etc/init.d/tftpd-hpa start
 - sudo /etc/init.d/nfs-common start
 - sudo /etc/init.d/nfs-kernel-server start

Ubuntu & BusyBox

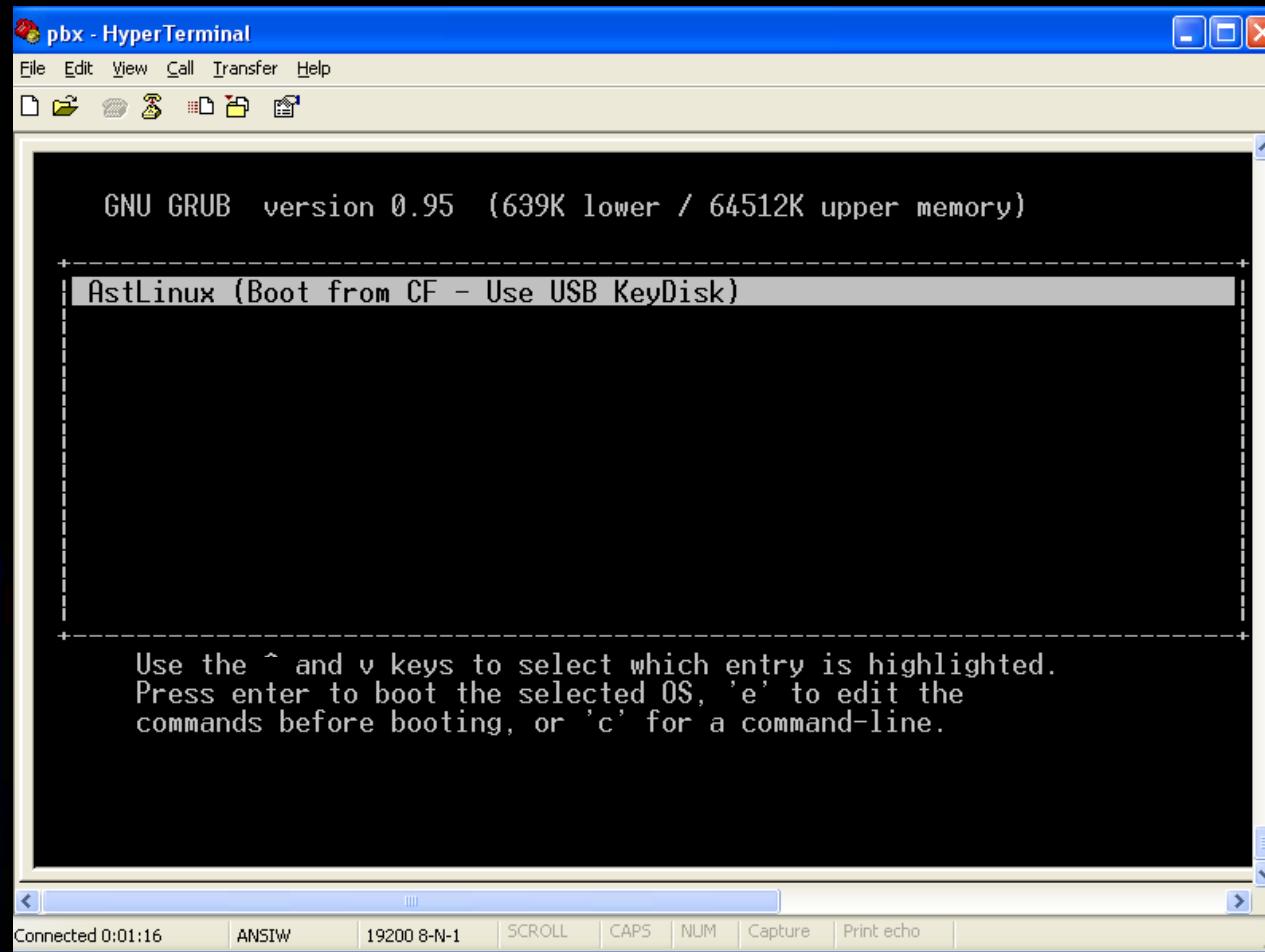

Use the Ubuntu “expert” installation option. Proceed through all the menus and configurations up to and including “Partition Disks.” Once the partition is complete, drop to a shell.

Installing the AstLinux Image over NFS

Mount the NFS export directory to /mnt/nfs. Verify the image is present. Now gunzip the image to the compact flash as shown (verify your /dev/<device>. The result is AstLinux on a compact flash.

Step-by-Step Guide to Insanity

- Booting the Soekris
 - AstLinux uses a 19200 baud rate on the console
 - Ctrl-P to stop boot
 - set ConSpeed=19200
 - Change your terminal settings as well

Successful Embedded AstLinux Installation

As a first time user, you will be given the opportunity to save all your config files, ssh keys and other necessary files to an external device. I used an SD card. It also stores my voicemails as well.

pbx - HyperTerminal

Configuration hell

The list of config files seems endless! But through trial and error, and sometimes luck, I found that you only need to modify two files to get a working box: sip.conf & extensions.conf.

sip.conf Configuration

[general]

register => <username>:<password>@inbound1.vitility.net:5060

context=default

bindport=5060

bindaddr=0.0.0.0

disallow=all

allow=ulaw

[300]

type=friend

secret=300

qualify=yes

dtmfmode=rfc2833

nat=yes

host=dynamic

context=voip

mailbox=1@default

sip.conf Configuration

```
[vitel-inbound]
type=friend
host=inbound1.vitility.net
context=voip
username=<username>
secret=<password>
insecure=very
canreinvite=no
```

```
[vitel-outbound]
type=friend
host=outbound1.vitility.net
context=voip
username=<username>
fromuser=<username>
trustpid=yes
sendrpid=yes
secret=<password>
canreinvite=no
```

extensions.conf Configuration

```
[general]
static=yes
writeprotect=no
autofallthrough=yes
clearglobalvars=no
priorityjumping=no
```

```
[voip]
include => inbound
include => outgoing
include => internal
include => voicemail
```

```
:[iax2trunk]
;include => john
;include => internal
```

```
[voicemail]
exten => 500,1,VoiceMailMain()
```

extensions.conf Configuration

```
[inbound]
```

```
exten => 2402383197,1,Dial(SIP/300,15)  
exten => 2402383197,n,VoiceMail(1@default,u)  
exten => 2402383197,n,Hangup()
```

```
exten => 9376883158,1,Dial(SIP/300,15)  
exten => 9376883158,n,VoiceMail(1@default,u)  
exten => 9376883158,n,Hangup()
```

```
exten => 5676234548,1,Dial(SIP/300,15)  
exten => 5676234548,n,VoiceMail(1@default,u)  
exten => 5676234548,n,Hangup()
```

```
exten => a,1,VoiceMailMain()  
exten => a,n,Hangup()
```

extensions.conf Configuration

```
[outgoing]
exten => _NXXNXXXXXX,1,SetCallerId,2402383197
exten => _NXXNXXXXXX,n,Dial(SIP/${EXTEN}@vitel-outbound)
```

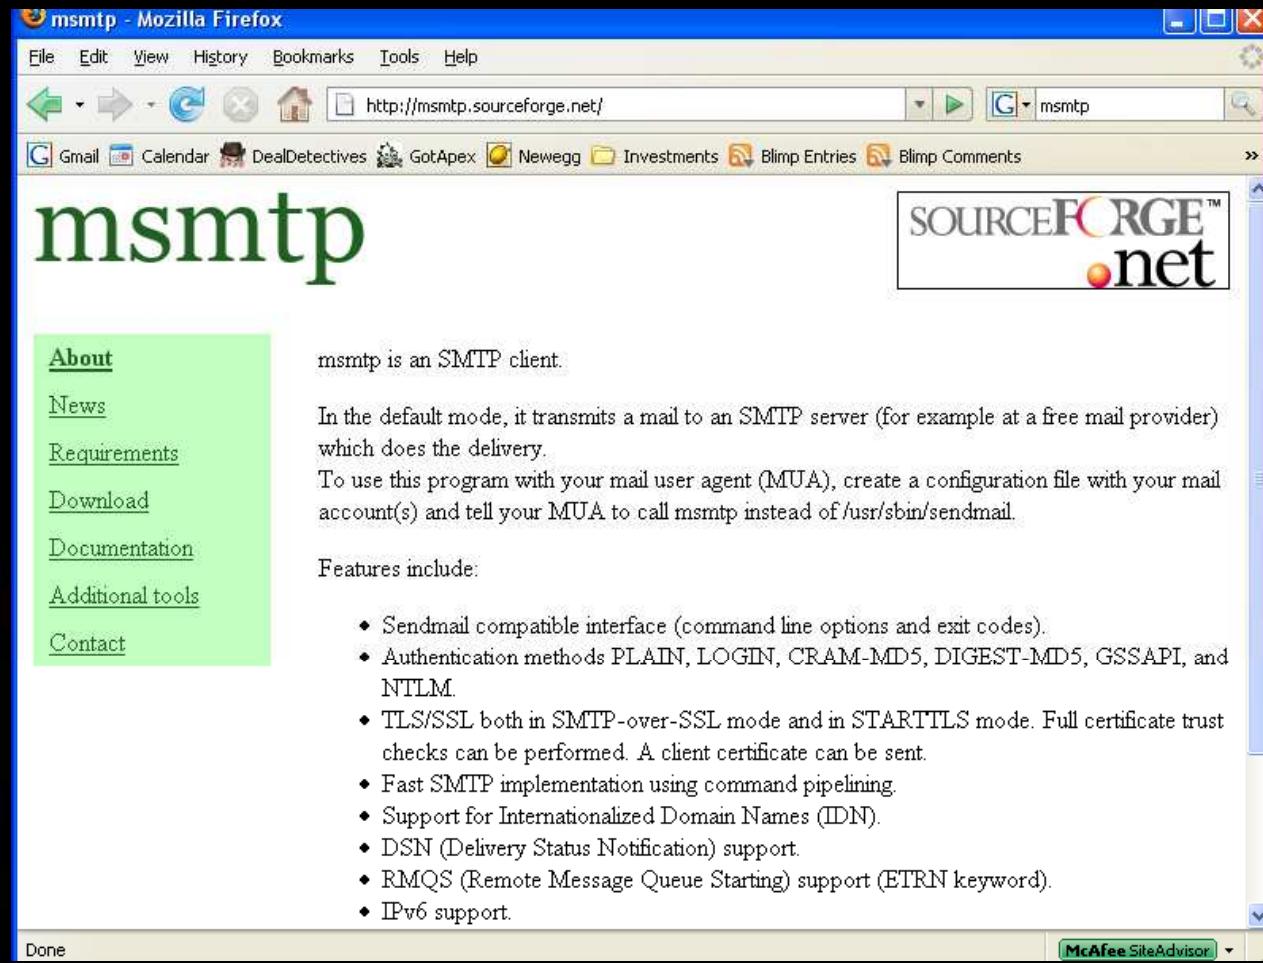

```
[internal]

```

```
;[john]
;exten => 301,1,Dial(SIP/301)
;exten => 301,n,Hangup()
```

voicemail.conf Configuration

```
[general]
format=wav49|gsm|wav
serveremail=asterisk
attach=no
skipms=3000
maxsilence=10
silencethreshold=128
maxlogins=3
emaildateformat=%A, %B %d, %Y at %r
mailcmd=/usr/sbin/msmtp -C /tmp/etc/msmtprc –t
sendvoicemail=yes

[default]
1 => <password>,Terry,,<mycellnumber>@vtext.com,attach=no|saycid=no|envelope=no|delete=no
```

Mini-smtp Client

Sendmail is way too big and complex for the embedded device. msmtp is the perfect solution. It's simply a client that passes the email to the real smtp server I use: Verizon.

/etc/rc.conf Configuration

<snip>

```
##This is the SMTP server that all mail from cron, etc. on this  
##system will be sent through. This includes Asterisk VM notifications.
```

```
SMTP_SERVER="66.174.3.30"
```

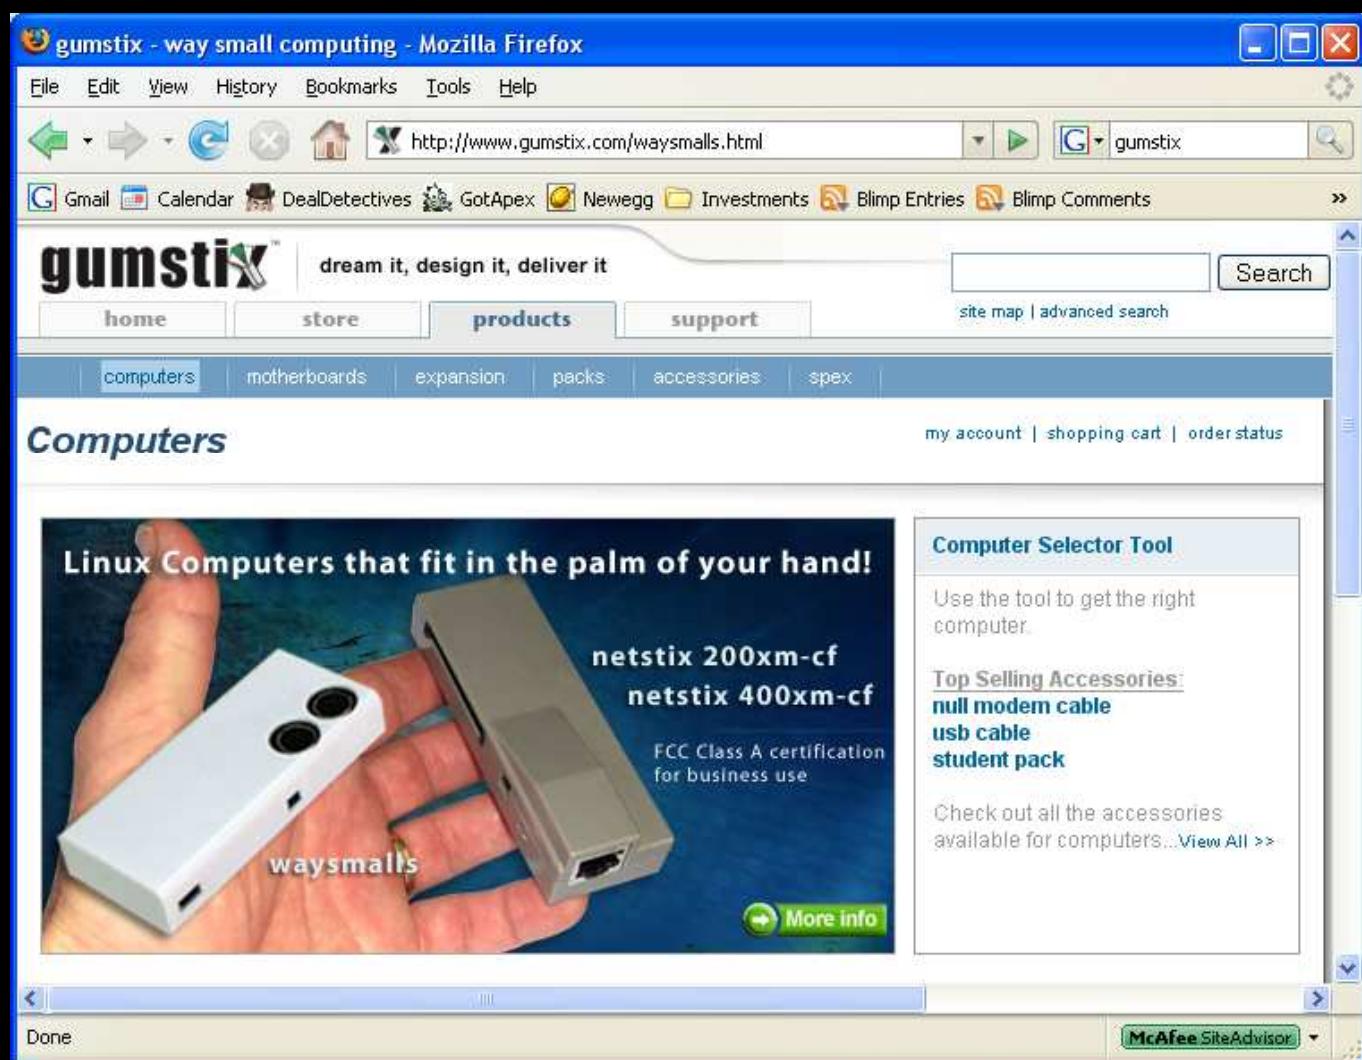

<snip>

Future Lunacy

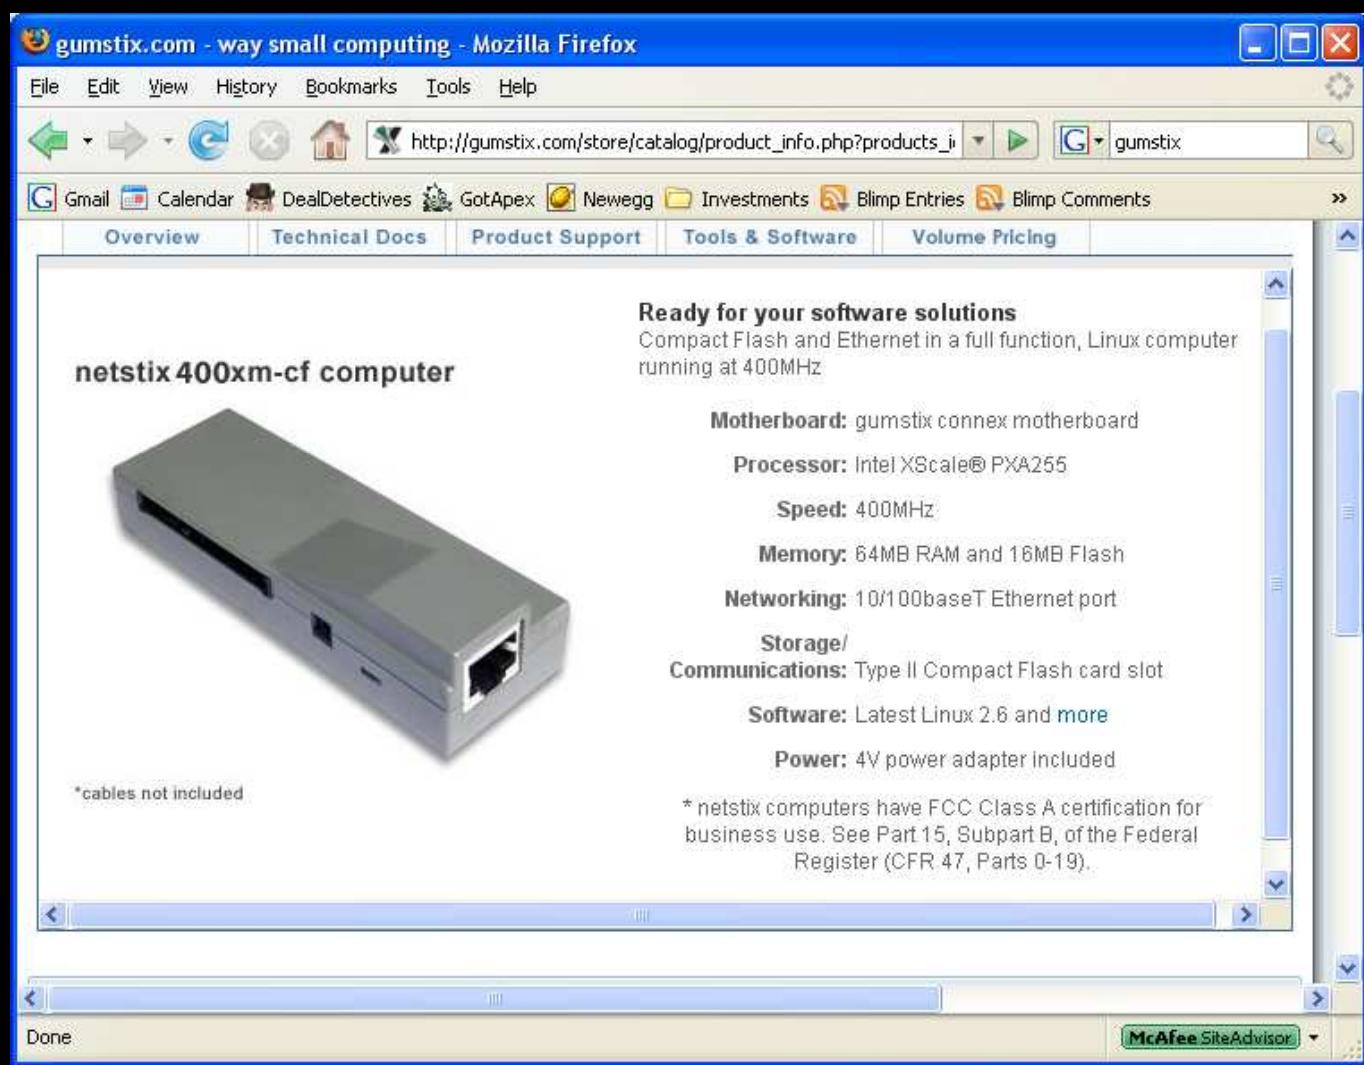

- 2.4 GHz Atheros 802.11b/g Card
 - Mini-PCI Type III Sockets
 - High Power 600mW
