```

A crazy idea ...

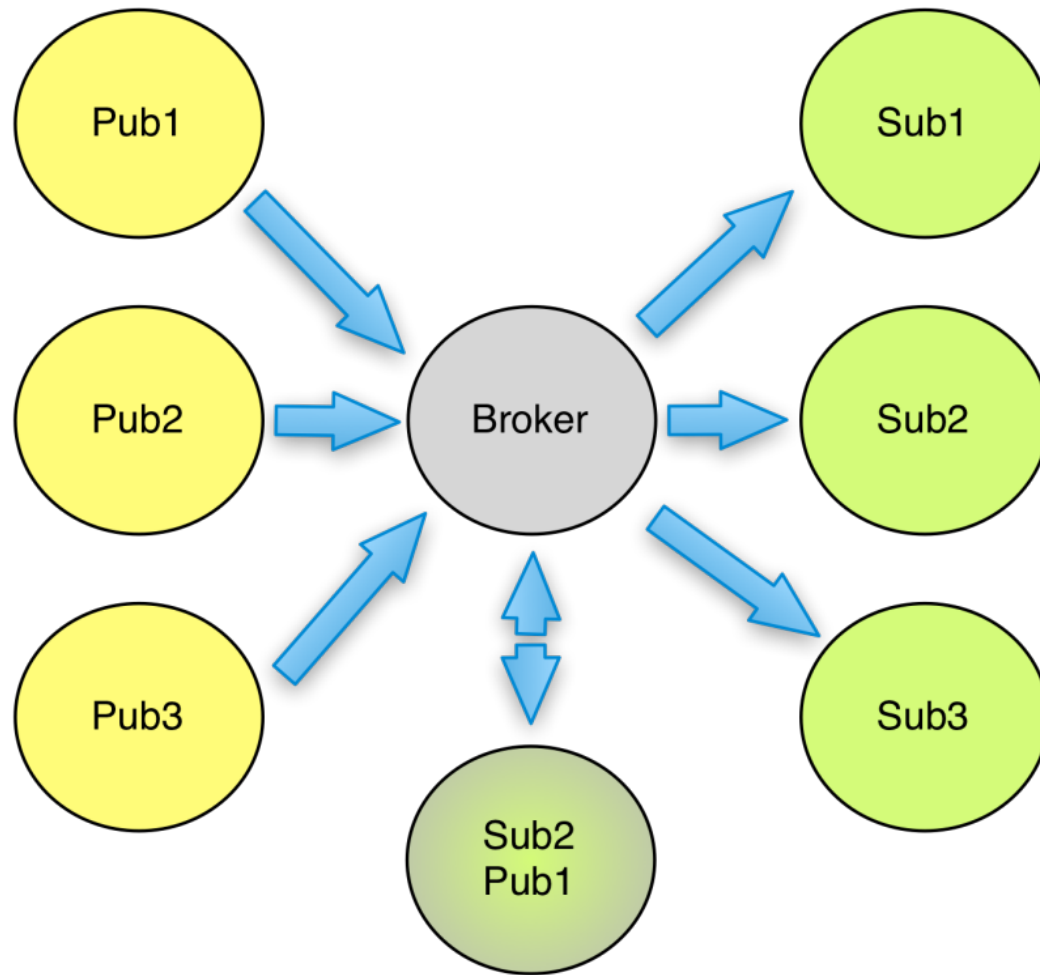

Privacy, Security, Easy data

MQTT is

MQTT is a standard, a transport,
for **PUB/SUB** messaging,
designed for unreliable networks,
binary payloads up to 256MB,
(+2 bytes), fast, **lightweight**,
ideal for low-bandwidth, high-
latency networks, **TLS**,
authentication, **ACLs**, TLS-PSK,
(payload encryption), keepalive,
last will & testament, UTF-8
hierarchical **topics**, wildcards

the landscape

and the **apps**?

MQTT what?!

OwnTracks
@OwnTracks

Following

We've decided to opt for a less geeky name. MQTTitude becomes OwnTracks. // You don't have to re-follow us -- you're doing that already. :-)

Marshall T. Rose
@_mtr

+ Follow

@OwnTracks sigh. The geeky name had attitude. This one is bland. Please revert commit...

Joerg Wende
@joerg_wende

@OwnTracks Like the new name ...

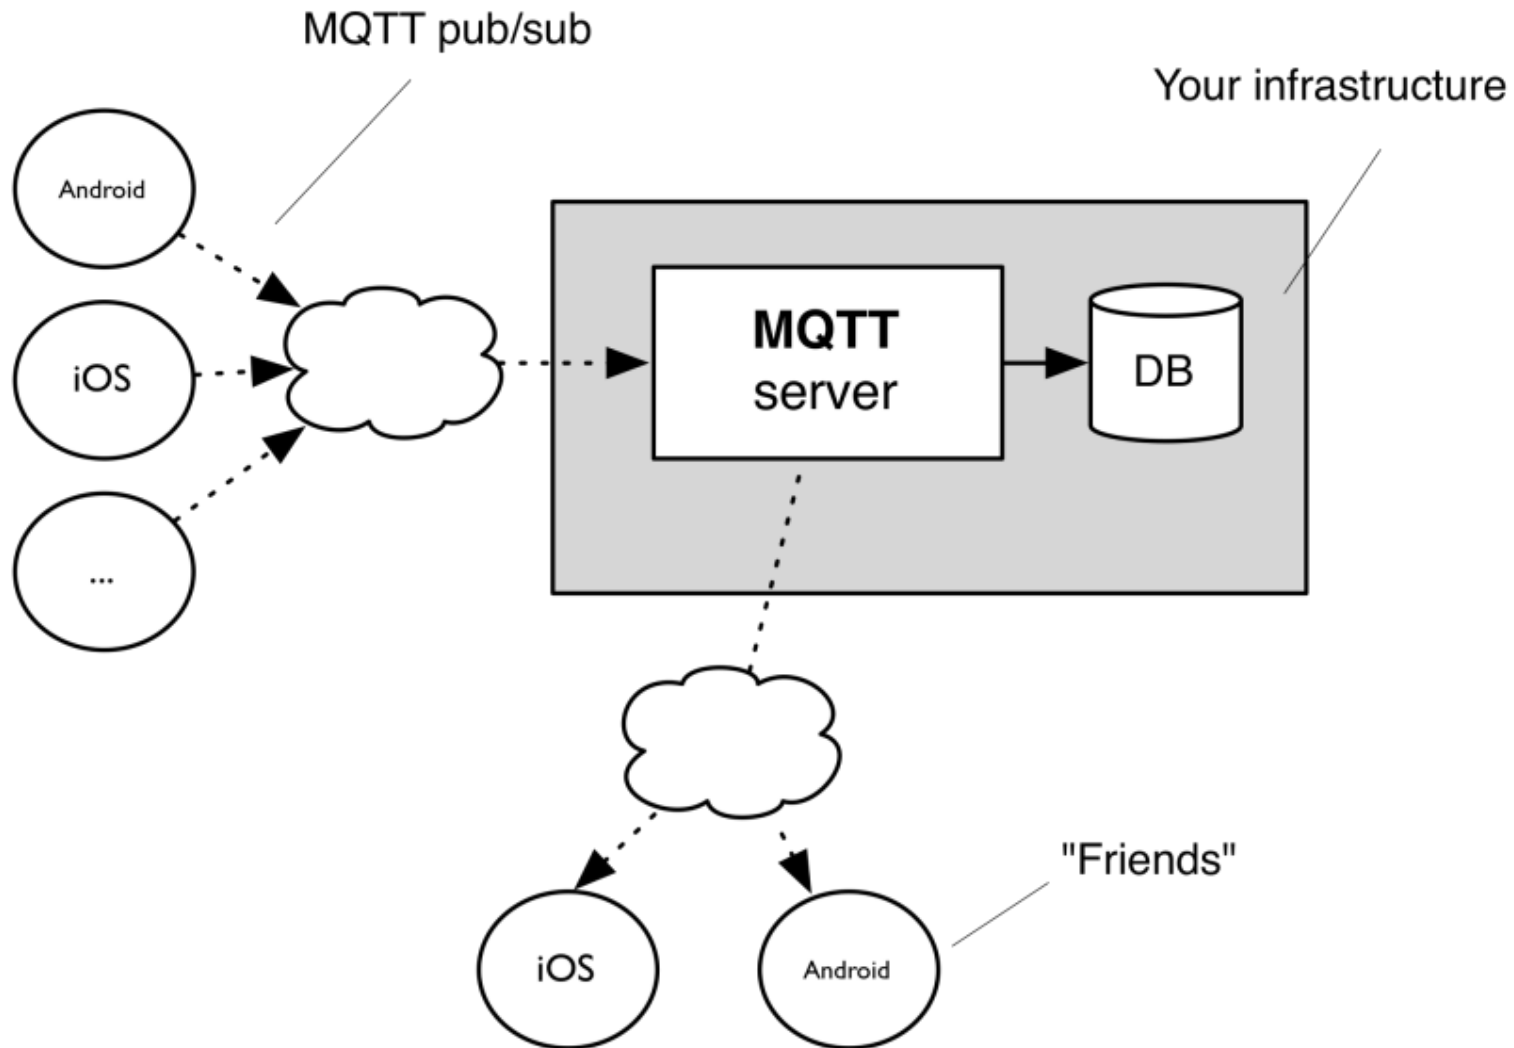

Bryan Boyd
@bryanboyd

+ Follow

@OwnTracks I don't know if a latitude-type service can ever be... less geeky :-) love the name!

owntracks.org/booklet/guide/broker/

we use a topic branch called `owntracks/username/device`, but you can override that name if you prefer to. The reason we've chosen that structure is to accomodate friends and family on a single broker, taking into consideration that a particular user might have more than one device.

Private broker

Ideally, you set up a private broker under your control. This sounds more difficult than it actually is, and there are some very nice brokers you can use free of charge on your own infrastructure. As an example, we've written up how to install Mosquitto on a Raspberry Pi.

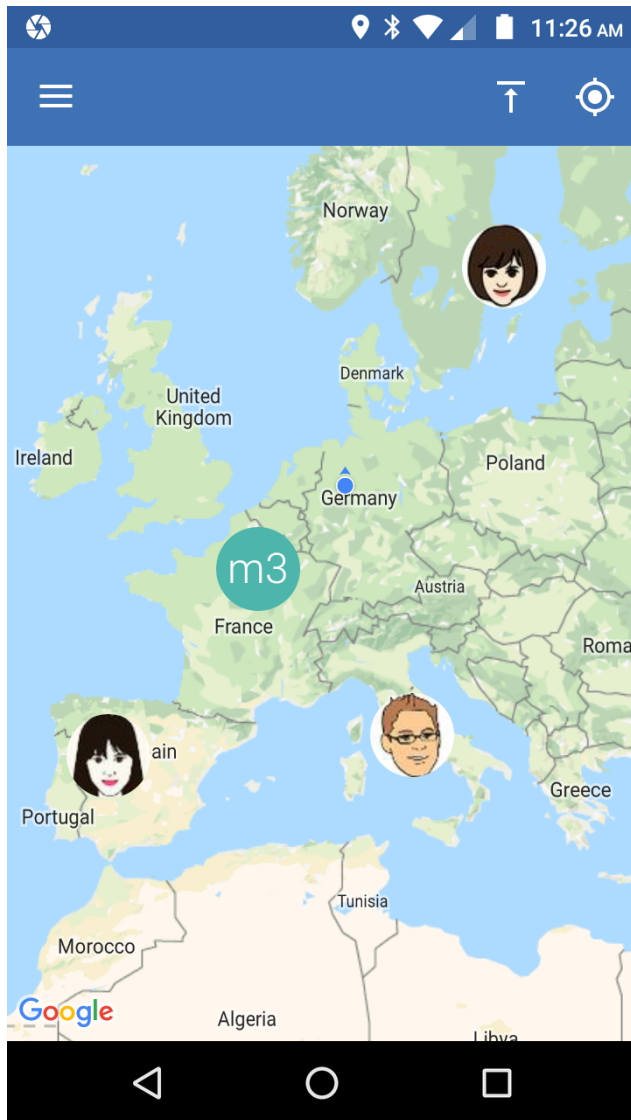

RasPi

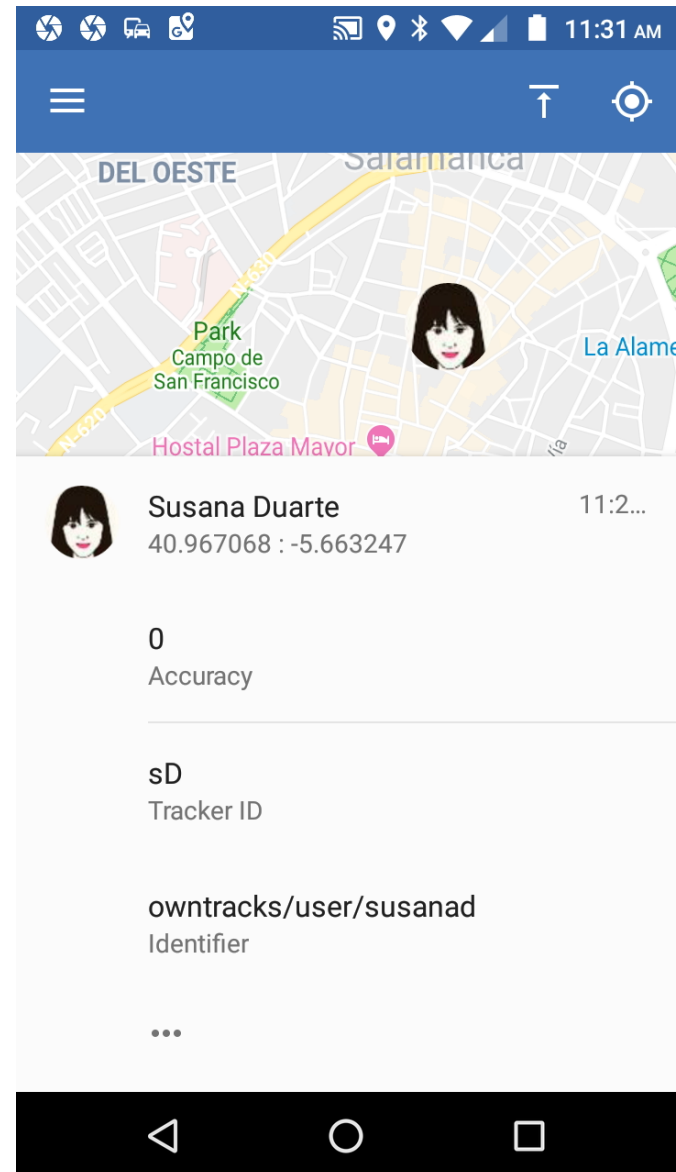

Your data: JSON

```
{  
  "_type": "location",  
  "batt": 21,  
  "lat": 48.85833,  
  "t": "m",  
  "lon": 3.29513,  
  "acc": 5,  
  "tid": "JJ",  
  "vel": 8,  
  "cog": 143,  
  "alt": 143,  
  "tst": 1540285680  
}
```

Transition events

```
{  
  "t": "c",  
  "tst": 1541794597,  
  "acc": 65,  
  "_type": "transition",  
  "event": "enter",  
  "lon": 3.29513,  
  "lat": 48.85833,  
  "wtst": 1539794983,  
  "tid": "jp",  
  "desc": "$HOME-100"  
}
```

HTT-what?

```
<?php
# Obtain the JSON payload from an OwnTracks app POSTed via HTTP
# and insert into database table.

header("Content-type: application/json");

$payload = file_get_contents("php://input");
$data = @json_decode($payload, true);

if ($data['_type'] == 'location') {

    # CREATE TABLE locations (dt TIMESTAMP, tid CHAR(2), lat DECIMAL(9,6), lon DECIMAL(9,6))
    $mysqli = new mysqli("127.0.0.1", "user", "password", "database");

    $tst = $data['tst'];
    $lat = $data['lat'];
    $lon = $data['lon'];
    $tid = $data['tid'];

    # Convert timestamp to a format suitable for mysql
    $dt = date('Y-m-d H:i:s', $tst);

    $sql = "INSERT INTO locations (dt, tid, lat, lon) VALUES (?, ?, ?, ?)";
    $stmt = $mysqli->prepare($sql);
    # bind parameters (s = string, i = integer, d = double, b = blob)
    $stmt->bind_param('ssdd', $dt, $tid, $lat, $lon);
    $stmt->execute();
    $stmt->close();
}

$response = array();
# optionally add objects to return to the app (e.g.
# friends or cards)
print json_encode($response);

?>
```

Bugs, bugs, **more** bugs

Significant mode not happening at 800kph #388

As anybody who does so can attest to, Open Source can be fun and *interesting*.

Recorder

The Recorder application is shown in three browser windows. The left window displays a map of Hilversum with several red location markers. The top-right window shows a map of Europe with a popup for Susana Duarte, located at Delegación de Hacienda, Calle Rector Lucena, 12-18, 37002 Salamanca, Spain. The bottom window displays a table of recorded data with columns for Date/Time, Name, TID, Battery, Vel, CoG, CC, and Address. The table contains 5 entries, with the last entry being Susana Duarte. Below the table, it shows 'Showing 1 to 5 of 5 entries' and a 'Toggle' section with buttons for 'topic', 'user', and 'battery'.

openHAB
Home Assistant
Traccar
Zanzito

...

The screenshot displays the Traccar web interface. On the left, there is a 'Devices' table with columns for Name, Status, and Last Update. Below this is a 'State' section showing various attributes and their values. On the right, a map shows the locations of the tracked devices, represented by icons of vehicles. The interface is clean and modern, with a blue header and footer.
